

Transportation Segment: Haynesville Expansion Project

- ▶ The Haynesville Expansion Project is the first material increase in capacity that has come online in the Haynesville Shale

Projects Announced	Description
Base Project	<ul style="list-style-type: none">• Added 1.1 Bcf/d of capacity with 46 miles of 36" pipe, 75 miles of 42" pipe and 14,200 HP of compression
Red River Lateral	<ul style="list-style-type: none">• \$47 million pipeline extension to increase capacity on RIGS• Added approximately 100,000 MMBtu/d of capacity, bringing total project capacity to ~1.2 Bcf/d

Transportation Segment Opportunities

Haynesville / Bossier Growth

- ▶ Since the initial well results from the Haynesville Shale became public in early 2008, drilling activity has continued to increase due to the low production costs relative to other producing basins in North America
- ▶ The presence of the Bossier Shale enhances the economics of the Haynesville play and creates the potential for additional returns. Because the Bossier and Haynesville Shales overlap, producers are able to increase drilling efficiencies
- ▶ The Haynesville Joint Venture is well-positioned to expand RIGS in the Haynesville/Bossier Shale
